UniBee (SaaS - billing)

[Product website](#) 🐝

- Launched: 2024
- Team size: 20-25

Running a subscription business sounds great—steady revenue, happy customers, smooth sailing... until you realize you have to track payments, handle global customers, and deal with unexpected issues (like that one person who "totally forgot" to update their credit card for the third time).

That’s where UniBee comes in. It’s not just another billing tool—it’s open-source, flexible, and built for businesses that live on subscriptions. No overpriced software, no vendor lock-ins, just a powerful system you can tweak to fit your needs.

UniBee
Our goal is to provide powerful billing tools to all businesses, enabling them to create effective pricing strategies

What is UniBee?

Think of UniBee as the brain of subscription business. It handles:

📌 **Tracking subscriptions** – whether customers pay monthly or based on usage, UniBee automates billing so customers don't have to chase payments manually.

📌 **Payments everywhere** – credit cards? PayPal? Crypto? No matter where your customers are or how they want to pay, UniBee has you covered.

📌 **Scaling with your business** – since it's open-source, you can tweak and expand its features as your business grows. No waiting for some corporate update—you're in control.

Why Is UniBee Different?

🔷 **Cost-effective** – no overpriced, locked-down subscriptions (ironically). You save money and keep control over your billing.

🔷 **Community-powered** – devs worldwide contribute to making UniBee better, so it's always evolving, secure, and innovative.

🔷 **Smart payment management** – UniBee doesn't just process payments—it helps recover failed ones with reminders and retry systems. Because let's be real, most "failed payments" are just people ignoring their email until their Netflix stops working.

Build the Future of Fintech with UniBee
Master real-world payment systems, blockchain tech, global SaaS scaling, and open-source innovation

What will you learn if you work with UniBee?

Working on UniBee isn't just about billing—it's about building the future of open-source fintech. Here's what makes it exciting:

💡 **Real-world payment systems** – get hands-on experience with subscription billing, usage-based pricing, and international payments—the backbone of every digital business.

🔗 **Blockchain & crypto payments** – want to work on cutting-edge payment tech? UniBee supports crypto transactions, so you'll dive

into how Bitcoin, Ethereum, and other digital currencies integrate with real-world businesses.

🌎 **Scaling global SaaS products** – learn what it takes to build and optimize a platform that handles payments worldwide, from different tax regulations to multi-currency support.

🛠️ **Open-source development** – since UniBee is community-driven, you'll contribute to a product that anyone can improve, tweak, and customize—meaning your work actually impacts businesses worldwide.

📈 **Smart automation & AI** – UniBee isn't just about charging customers. It automates invoice generation, retries failed payments, and even helps businesses recover lost revenue through smart payment recovery systems.

If you love working on fintech, automation, and open-source projects, UniBee is where tech meets real impact. Plus, you get to tell people, "Yeah, I help businesses worldwide get paid seamlessly." Which, let's be honest, sounds way cooler than "I work in billing." 😎
